

Enabling Me Ltd

Enabling Me delivers innovative, life enhancing products to the social and supported housing sectors. Our mission lies in protecting our vulnerable society, developing assistive technology that enables people to live independently.

Following extensive research and development, Enabling Me launched touchbase™ in 2020. A simple, user-focused concept, touchbase™ allows tenants to easily access their support network, improving communication and overall quality of life.

Enabling Me is a provider of telecommunication services via our assistive technology: Touchbase. Touchbase is currently being utilised to great effect by specialist supported housing and social care providers so that vulnerable individuals and their families can have immediate access to one another and their network of support services - this is usually at no cost to the individual as costs are recoverable through housing benefit or individual packages of care.

In 2020 Enabling Me Ltd launched Touchbase and since then we have joined the **Technology Enabled Care** network, registered with **Homeless Link**, signed the **Armed Forces Covenant** and achieved the **Employer Recognition Scheme Bronze Award** and we continue to expand and grow Enabling Me Ltd as we develop positive working relationships with various Housing Associations and Support Service/ Care providers throughout the UK. We currently have devices deployed across a range of services which include (but is not limited to) 16-18 provisions, ex-offenders, complex adults and Armed Forces Community-designated developments across England and Wales within approximately 65 local authorities.

If you wish to discuss potential opportunities to collaborate to ensure that we can support vulnerable individuals and their families in your area then please do not hesitate to contact us.
